Will this time work for you all? HQ scheduled an Ozone Designations call for 11 a.m. that conflicts with our original time. Please let me know, thanks!

Agenda:

- DAQ Permit by Rule update
- Oct 12 meeting to share draft rules with industry; will share with elected officials during Oct.; will share with EPA too
-
- Uinta Basin FIP update; more robust legal analysis, alternatives analysis, don't use Reg 7 cost analysis,
-

- Exceptional Events (June 8-9, 2015) package progress; published in the Ute Bulletin; not interest from the public; at the Summit meeting, the county health department were happy about it. County commissioner Springer was happy about it. Letter of support is going out today.

-

- Ozone designations/implementation guidance update

- Brock, the state, tribe and EPA should work together, over the next year. Minnie wants a really small nonattainment. Making it a smaller designation area, confining it to Ouray. Brock is briefing Governor on Sept 28th. Will email the designation recommendation to me and Minnie.

-

- Voluntary ozone seasonal controls by operators effort, update. The letter went out on Friday to operators. Talked to WEA ahead of time. Seemed supportive in the WEA coordination call. National Fuel Corp, Rosewood, Summit Operating, Uintah Investors letters were returned.

-

- Ozone Advance update; Sheila is working on the letter/update.

- STEP program update; will be done the third week of Oct.; ability for operators to check the data to see what they're finding; login so they can only see their own data; video tape the emissions. Operators will provide an explanation if they're aware of it. 475 all sites on state lands that had controls on tanks. Only looking at tanks. When Whitney went out 2 of the 4 operators that said they had combustors did not.

- Other, please email to me
